Spidertracks' Core Features

Find out what makes Spidertracks the world's most trusted flight watch solution

Global Real-Time Aircraft Tracking

Thanks to the reliability and comprehensive coverage of the Iridium satellite network, you'll always be connected to your aircraft — no matter where they are in the world.

Unlimited Platform Access

Our platform allows you unlimited viewing of past tracks and the ability to view tracks from all your aircraft on one screen.

Flight Distress Detection

If an incident occurs and the Spider loses power, Automated Watch will send an SOS message after 12 minutes of no communication.

Manual SOS Reporting

The SOS button on the keypad can be used to send instant alert messages to your preset emergency contacts.

Spidertracks' Emergency Management Framework (EMF)

Our EMF can automatically detect an SOS state and alert your support team without the involvement of your pilots or dispatchers.

Speed up/Slow Down notification

Know more about what's going on with your aircraft. Set custom alerts and notifications when each event is triggered.

One-Way Preset Messages

Use the Mark button to manually send preset emails or SMS messages from the cockpit.

Estimated Time of Arrival

Increase your operational efficiency by knowing when an aircraft is going to arrive at a specific place with the ETA function on the desktop platform.

VFR/IFR Sectional Overlays

Boost your operational situational awareness with our free VFR/IFR sectional overlays for the flying page on the desktop platform.

Altitude Event Alerts

Know when something isn't right. Your Spider automatically monitors rate of climb and descent and can immediately alert you if your limits are exceeded.
